**Re: Geotechnical Sampling and Testing - Revised  
Maintenance Dredging – Phase 2 – 13-WL-0966(R2)  
Sediment Sampling Program – Wetlands License Testing  
Sparrows Point, MD  
RBB Project No. 17246-0 MD**

Dear Mr. Haid:

The Robert B. Balter Company (Balter) has recently completed our drilling and laboratory services for the above-mentioned project. Our work was performed in accordance with our proposal and the supplied Scope of Work from Tradepoint Atlantic. The results of our field activities are provided below. This report has been revised to correct minor typographical errors.

### **Project Background**

Tradepoint Atlantic (TPA) is planning to perform maintenance dredging of the access channel and berthing areas in the Patapsco River between Sparrows Point Terminal and Brewerton Channel. The proposed dredge depths are between 40 feet to 45 feet below mean low water.

Physical and chemical characterization of the material to be dredged was required in order to satisfy the State Wetlands License (13-WL-0966[R2]), Special Condition "B" and the Maryland Port Administration.

This geotechnical data report provides the laboratory testing results for Phase 2 of the proposed dredge work. In total, there are 3 phases of dredging planned under the current license.

### **Scope of Work**

A total of nine (9) soil borings were performed as part of Phase 2 of this scope. The soil borings (B-1 through B-9) were drilled using a tracked-mounted drill rig. The drill rig was placed on a work barge with spuds and a drilling well that was provided by Corman Marine. Corman Marine navigated the barge to within approximately 10-20 feet of each specified boring location. However, one (1) Phase 2 boring location (B-1) was shifted slightly over 20 feet due to the presence of a docked ship. The approximate boring locations are shown on the attached **Plate 2, Boring Location Plans**.

The borings were located by Corman Marine using a handheld GPS unit on the barge. GPS Coordinates for the planned Boring Locations are provided below on Table 1.

**Table 1 – Soil Boring Locations**

Boring	Depth Sampled (ft.) <sup>(1)</sup>	Northing <sup>(2)</sup>	Easting <sup>(2)</sup>	Comments
B-1	45	560,286.8	1,458,983.8	---
B-2	45	559,311.1	1,459,184.6	Moved approx. 50 feet south
B-3	42	559,365.1	1,458,898.1	---
B-4	45	559,081.1	1,459,198.2	---
B-5	42	558,702.2	1,459,259.9	---
B-6	45	558,417.4	1,459,259.9	---
B-7	42	557,826.0	1,459,073.1	---
B-8	45	557,534.2	1,459,300.0	---
B-9	42	556,911.7	1,459,118.5	---

**Notes:** <sup>(1)</sup> Depth below Mean Low Water

<sup>(2)</sup> Coordinates provided are based on NAD83 Maryland State Plane Zone, US Foot MD83F

Soil borings were advanced to a maximum depth of 45 feet below mean low water, as directed in the scope of work. The borings were advanced in approximate 2-foot depth increments, once the bottom of the water was reached. The approximate depth below mean low water was determined by measuring the water depth with a weighted measuring tape, and recording the tide height at the time of sampling. Samples were collected using 3-inch diameter split spoon samplers, after advancing the 4-inch diameter casing to the required depths. After each advance, the sampler was withdrawn, and collected soils were removed and immediately sealed in a clean plastic bag marked with the location. A minimum volume of 0.5 gallons was recovered from each grab sample location. The collected soils were visually examined on site by our engineer who estimated their classifications and provided descriptions. Immediately after visual classification was complete, the bags were placed in a cooler with ice for return to Balter's laboratory.

Following return to Balter's laboratory, the samples were composited using a volumetric approach with approximately equal volumes from each boring location to create a composite sample. The samples were hand mixed in a stainless steel pan, which was placed over ice to retain sample temperature and minimize volatilization during mixing. The hand mixing process included a total volume of about 1.5 gallons and took approximately 5 to 20 minutes. All containers used for Volatile Organic Compound testing were filled first, and those samples were exposed no more than 5 minutes. Generally, samples were mixed within 24 hours of sample collection in a controlled environment at Balter's laboratory. As noted previously, the samples were kept in clean, sealed Ziploc plastic bags on ice from sample collection until the time of sample homogenization. The composited samples were then placed in the appropriate containers with laboratory recommended preservatives (airtight glass jars, vials with methanol, etc.) for the specified test method. The glass jars and other laboratory provided containers with the composite samples were then kept refrigerated or on ice in a cooler through transport to the environmental testing laboratory.

Phase 2 composite samples were mixed as follows:

- P2-1: Borings B-3, B-5, B-7, and B-9
- P2-2: Borings B-1, B-2, B-4, B-6, and B-8

Limited physical characteristic laboratory testing was performed on the composite soil samples in Balter's laboratory as well. Testing on the selected soil samples generally included Natural Moisture Contents, Atterberg limits, Sieve Analyses, Hydrometer analyses, and Specific Gravity testing.

Chemical characterization was provided by a National Environmental Laboratory Accreditation Program (NELAP)-certified laboratory, which was contracted directly through Tradepoint Atlantic. Tests within the Wetlands License scope of work included:

- Priority Pollutant Metals (including Mercury)
- Hexavalent Chromium
- TPH Diesel Range Organics
- TPH Gas Range Organics
- Oil and Grease
- Priority Pollutant Volatile Organic Compounds
- Priority Pollutant Semi-Volatile Organic Compounds
- PCBs
- Cyanide

All of the environmental testing was performed in accordance with the previously approved EPA Methods and Procedures, as coordinated between Tradepoint Atlantic and the contracted environmental laboratory, as reported to us. Proper Chain of Custody (COC) procedures were also used. Completed COC forms have been provided to TPA by their environmental laboratory. Samples collected from the Phase 2 area were transported to the testing laboratory within approximately 24-30 hours of collection, which is well within the specified holding times for testing.

### **Subsurface Conditions**

**General** - The subsurface conditions encountered during our exploration operations are indicative of the conditions at the field test locations at the time of the work. The soil stratigraphy shown on the attached subsurface logs is based on discrete soil and decomposed rock samples taken at the above listed sample intervals. The actual transition between soil types at the boring locations may be more gradual than indicated on the boring logs. Additionally, significant variations may occur outside the specific sample locations.

**Sediment Soils** – Sediment soils that have deposited within the channels were encountered in each of the borings within the studied areas. Based on visual observations of the collected soil samples, the natural soils consisted of very soft Silt (CL-ML, ML, MH), and Clay (CL, CL-ML). No unusual odors were detected during the time of drilling.

The attached boring logs include a description and visually estimated classification for each soil layer, SPT Values (where applicable) and boring depths. The method of classification used in preparing the strata descriptions is based on our interpretation of the Unified Soils Classification System (USCS). Visual classifications were performed by an experienced Geotechnical Engineer. Final descriptions on the Boring Logs reflect physical testing results.

It should be noted that the boring location plan and the boring log represent an integral part of this report, and separating these figures may lead to misinterpretation by others.

## Laboratory Results

**Geotechnical Testing** - Composed samples were subjected to laboratory analyses to estimate their classifications according to the Unified Soils Classification System. This testing included natural moisture contents, Atterberg limits determinations, Grain size Analyses (Sieve and Hydrometer), and Specific Gravity. Those results are presented at the end of this letter report and are summarized in the following table.

**Table 2 - Classification Test Results for Soil**

<i>Sample</i>	<i>USCS</i> <sup>(1)</sup>	<i>Moisture Content (%)</i>	<i>Specific Gravity</i>	<i>Atterberg Limits</i>			<i>+#200 Sieve (%)</i>		<i>-#200 Sieve (%)</i>	
				<i>LL</i>	<i>PL</i>	<i>PI</i>	<i>% Gravel</i>	<i>% Sand</i>	<i>% Silt</i>	<i>% Clay</i>
P2-1	MH	270.4	2.684	97	47	50	0.0	0.7	36.6	62.7
P2-2	MH	268.6	2.723	93	47	46	0.0	1.9	38.1	60.0

**Notes:** <sup>(1)</sup> Organic content testing not included in scope of work

It should be noted that the samples were visually identified to contain organic material. However, organic content testing was not included in our scope of work. Therefore, lab testing could not identify whether the soils classify as Organic SILT (OH) materials.

**Environmental Testing** - Additionally, composite samples from the areas discussed above were subjected to environmental testing as required in the Scope of Work. It should be noted that constituents which are not present of priority pollutant lists were also reported. Those values are not shown in the tables below, but can be found in the attached appendices.

**Table 3 – Priority Pollutant Metals Test Results (EPA 6020A)**

## **APPENDIX A - BORING LOGS**

**THE ROBERT B. BALTER COMPANY**  
**IDENTIFICATION OF SOIL SAMPLES**

Soils are described in the boring logs according to the following criteria with the principal constituents written in capital letters. Other constituents are preceded by descriptive terminology that is used to denote the percentage of weight of each component. Soil descriptions are determined visually except where laboratory classification test data are available. Classifications are based on The Robert B. Balter Company's interpretation of ASTM D 2487-00.

<b>COARSE GRAINED SOIL</b> >50% Retained on No. 200 Sieve	<b>GRAVEL</b>	0 to 5% Fines	Well Graded		<b>GW</b>	GRAVEL
			Poorly Graded		<b>GP</b>	GRAVEL
		6 to 12% Fines	Silty Fines	Well Graded	<b>GW-GM</b>	GRAVEL with Silt

				> 30	Hard		

**Fill** materials are placed by man, and may be identified by unnatural artifacts, unnatural mixed grain sizes or layering, or trustworthy documentation of fill placement.

**Possible Fill** materials are difficult to distinguish from natural soils, exhibiting minor distinctions.

**Decomposed Rock** consists of residual soil with SPT N-values between 50 blows per foot and blows per 4 inches (50/4").

**Highly Weathered Rock** consists of residual soil with SPT N-values between 50/3" and 50/1".

## Certificate of Analysis

Revised Report - 6/11/2019 12:28:39 PM - See workorder comment section for explanation

Project Name:	<b>2018-SEDIMENTS - BALTIMORE MD</b>	Workorder:	<b>2346382</b>
Purchase Order:		Workorder ID:	<b>2018-SEDIMENTS - BALTIMORE MD</b>

Dear Mr. Newman:

Enclosed are the analytical results for samples received by the laboratory on Thursday, October 25, 2018.

The ALS Environmental laboratory in Middletown, Pennsylvania is a National Environmental Laboratory Accreditation Program (NELAP) accredited laboratory and as such, certifies that all applicable test results meet the requirements of NELAP.

If you have any questions regarding this certificate of analysis, please contact Mrs. Vanessa N Badman (Project Coordinator) at (717) 944-5541.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable. For a specific list of accredited analytes, refer to the certifications section of the ALS website at [www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads](http://www.alsglobal.com/en/Our-Services/Life-Sciences/Environmental/Downloads).

This laboratory report may not be reproduced, except in full, without the written approval of ALS Environmental.

ALS Spring City: 10 Riverside Drive, Spring City, PA 19475 610-948-4903

*This page is included as part of the Analytical Report and must be retained as a permanent record thereof.*

Mrs. Vanessa N Badman  
Project Coordinator

## SAMPLE SUMMARY

Workorder: 2346382 2018-SEDIMENTS - BALTIMORE MD

### Notes

- Samples collected by ALS personnel are done so in accordance with the procedures set forth in the ALS Field Sampling Plan (20 - Field Services Sampling Plan).
- All Waste Water analyses comply with methodology requirements of 40 CFR Part 136.
- All Drinking Water analyses comply with methodology requirements of 40 CFR Part 141.
- Unless otherwise noted, all quantitative results for soils are reported on a dry weight basis.
- The Chain of Custody document is included as part of this report.
- All Library Search analytes should be regarded as tentative identifications based on the presumptive evidence of the mass spectra. Concentrations reported are estimated values.
- Parameters identified as "analyze immediately" require analysis within 15 minutes of collection. Any "analyze immediately" parameters not listed under the header "Field Parameters" are preformed in the laboratory and are therefore analyzed out of hold time.
- Method references listed on this report beginning with the prefix "S" followed by a method number (such as S2310B-97) refer to methods from "Standard Methods for the Examination of Water and Wastewater".
- For microbiological analyses, the "Prepared" value is the date/time into the incubator and the "Analyzed" value is the date/time out the incubator.
- An Analysis-Prep Method Cross Reference Table is included after Analytical Results & Qualifiers section in this report.

### Standard Acronyms/Flags

J	Indicates an estimated value between the Method Detection Limit (MDL) and the Practical Quantitation Limit (PQL) for the analyte
U	Indicates that the analyte was Not Detected (ND)
N	Indicates presumptive evidence of the presence of a compound
MDL	Method Detection Limit
PQL	Practical Quantitation Limit
RDL	Reporting Detection Limit
ND	Not Detected - indicates that the analyte was Not Detected at the RDL
Cntr	Analysis was performed using this container
RegLmt	Regulatory Limit
LCS	Laboratory Control Sample
MS	Matrix Spike
MSD	Matrix Spike Duplicate
DUP	Sample Duplicate
%Rec	Percent Recovery
RPD	Relative Percent Difference
LOD	DoD Limit of Detection
LOQ	DoD Limit of Quantitation
DL	DoD Detection Limit
I	Indicates reported value is greater than or equal to the Method Detection Limit (MDL) but less than the Report Detection Limit (RDL)
(S)	Surrogate Compound
NC	Not Calculated
*	Result outside of QC limits

## ANALYTICAL RESULTS

Workorder: 2346382 2018-SEDIMENTS - BALTIMORE MD

### PARAMETER QUALIFIERS

Lab ID	#	Sample ID	Analytical Method	Analyte
2346382001	2	P2-1 Wetlands	SW846 8260B	Methylene Chloride
The QC sample type LCSD for method SW846 8260B was outside the control limits for the analyte Methylene Chloride. The % Recovery was reported as 139 and the control limits were 68 to 133.				
2346382002	1	P2-2 Wetlands	SW846 8270D	2-Fluorobiphenyl
The surrogate 2-Fluorobiphenyl for method SW846 8270D was outside of control limits. The % Recovery was reported as 38 and the control limits were 40 to 110. This result was reported at a dilution of 1.

**QUALITY CONTROL PARAMETER QUALIFIERS**

Lab ID	#	Sample Type	Analytical Method	Analyte
2835138	1	Matrix Spike	SW846 6020A	Aluminum, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.				
2835138	2	Matrix Spike	SW846 6020A	Manganese, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.				
2835138	3	Matrix Spike	SW846 6020A	Chromium, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.				
2835138	4	Matrix Spike	SW846 6020A	Lead, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.				
2835138	5	Matrix Spike	SW846 6020A	Magnesium, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.				
2835138	6	Matrix Spike	SW846 6020A	Calcium, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.				
2835138	7	Matrix Spike	SW846 6020A	Iron, Total
The concentration of this analyte was greater than 4 times the concentration of the spike added to the matrix spike. According to protocol, the calculation for percent recovery of the matrix spike is not valid.

November 01, 2018:

Vanessa Badman  
ALS Environmental  
34 Dogwood Lane  
Middletown, PA 17057

Work Order: **HS18101614**

Laboratory Results for: **2346382**

Dear Vanessa,

ALS Environmental received 6 sample(s) on Oct 30, 2018 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "RJ MASHIA".

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning! Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on [fedex.com](http://fedex.com). FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery (misdelivery) or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income, interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$1,000, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.
