### **INTRODUCTION**

Kleinfelder has prepared this Groundwater Monitoring and Remedial Status Report for ExxonMobil Environmental & Property Solutions Company (ExxonMobil) in accordance with the September 11, 2008 *Consent Decree*.<sup>1</sup> This report summarizes monitoring and remedial activities conducted during the third quarter of 2023 for the above-referenced facility (the site), including activities related to supply well and Point of Entry Treatment (POET) sampling.

### **GENERAL SITE INFORMATION**

Site setting, physical description, and investigation activities have been detailed in previous submittals to the Maryland Department of the Environment (MDE).<sup>2,3</sup> Monitoring well construction details are provided as **Table 1**. A site plan depicting the site, surrounding properties, and monitoring well network is included as **Figure 1**.

### **MONITORING ACTIVITIES COMPLETED THIS PERIOD**

#### *Groundwater Sampling*

Monitoring and sampling activities were conducted in the third quarter of 2023 in accordance with MDE approval<sup>3,4</sup> and are detailed on **Table 2**. Groundwater concentration distribution for east and west recovery zones are depicted on **Figures 2** and **3**. The MDE-approved sampling schedule is presented on **Figure 4**. Groundwater sampling completed in the third quarter of 2023 included:

- Quarterly sampling (51 wells) completed in September 2023;
- Pending MDE's response to the February 27, 2023 *Sampling Reduction, Well Abandonment, and Additional Cycling Work Plan* (Workplan), samples were prioritized for collection from wells proposed for quarterly sampling, in addition to wells proposed for abandonment that MDE requested to be sampled.
- HydraSleeve™ samples were collected via discrete-depth samplers as listed in **Table 2**.

- Monitoring wells MW-45 and MW-45R were not sampled due to inactive submersible pumps blocking manual bailer sampling. Monitoring well MW-183 was not sampled due to a stuck pump that is blocking the well.

Groundwater samples collected in the third quarter 2023 were submitted to Eurofins Lancaster Laboratories of Lancaster, Pennsylvania for analysis of select volatile organic compounds (VOCs) and fuel oxygenates using Environmental Protection Agency (EPA) Method 8260B. Monitoring well and surface water analytical data are summarized in **Table 2** and depicted on **Figures 2** and **3**.

#### *Groundwater Gauging*

Select monitoring wells were gauged with an electronic interface probe (EIP) prior to sample collection; a quarterly synoptic monitoring well gauging event was not completed during the third quarter of 2023. A potentiometric surface map is presented as **Figure 5** and is based on groundwater elevations measured in the third quarter 2023 from non-pumping "A" zone monitoring wells. Approximately 51 monitoring wells located across the current project area were used to generate the potentiometric contours. Groundwater gauging data is presented in **Table 3**. Liquid phase hydrocarbon was not detected in any monitoring well during the third quarter of 2023.

#### *Supply Well Sampling*

As per the January 25, 2021 Response to Request to Stop Sampling Potable Wells letter from the MDE, 28 potable wells continue to be sampled. Of these 28 wells, 2 are sampled monthly, 12 are sampled quarterly and 14 are sampled semi-annually. Semi-annual potable wells are sampled in the second and fourth quarters.

Potable well methyl tertiary butyl ether (MtBE) results are illustrated on **Figure 6** and potable well data is presented in **Table 4**. The private supply wells with MtBE concentrations above 0.5 micrograms per liter ( $\mu\text{g/L}$ ) during this reporting period are listed in **Table 5a**, and benzene concentrations above 0.5  $\mu\text{g/L}$  are listed in **Table 5b**. The following sampling events were conducted during this reporting period:

- Monthly Potable Well Sampling – July, August, September 2023.
  - 2 wells were sampled during each of the monthly events.
- Quarterly Potable Well Sampling<sup>5</sup> – September 2023.
  - 2 quarterly wells were not sampled during the third quarter as noted in **Table 6**.

No gasoline constituents were detected in supply wells above MDE standards for groundwater during this reporting period with the exception of MTBE in samples collected July 10, August 7, and September 18, 2023 from the potable well located at 3627A Southside Avenue

During the third quarter 2023, no residential properties were sampled for the first time.

---

<sup>5</sup>At 14307 Jarrettsville Pike, samples were collected monthly from Well A. Due to a mechanical pump failure, Well B has not been sampled since December 2010.

## REMEDIATION ACTIVITIES

During the third quarter 2023, groundwater recovery was conducted with up to 4 recovery wells, MW-38C, MW-54B, MW-187A, and MW-187C as approved by the MDE. Remediation system areas are numbered to correspond with the labeled areas on **Figure 7**. There is currently one remediation system present at the site: groundwater extraction/treatment/discharge.

### Groundwater Extraction and Treatment System

Groundwater is recovered from monitoring wells depicted on **Figure 7** through submersible pneumatic pumps. Groundwater recovery was conducted in compliance with *Water Appropriation and Use Permits BA2006G003(05)*<sup>6</sup> and *BA2006G103(03)*<sup>7</sup> while these permits were in effect. On July 11, 2023, the MDE Water Supply Program granted exemptions to both of these permits. Liquid phase granular activated carbon (LGAC) is used to treat recovered groundwater prior to discharge.

When the system is running, effluent samples are collected once per month for compliance with the Notice of Intent (NOI) discharge permit and results are reported quarterly to the MDE in a discharge monitoring report. Effluent data for the groundwater treatment system are summarized in **Table 9**. Groundwater remediation system treatment efficiency for the third quarter 2023 is summarized in **Table 8**. Groundwater recovery and treatment system performance is summarized below and in **Table 7**.

| Quadrant                  | Runtime (%) | Est. Average Pumping Rate (gallons per minute [gpm]) |
|---------------------------|-------------|--|
| Southwest (up to 2 wells) | 70%         | 0.04   |
| Northeast (up to 2 wells) | 70%         | 0.06   |

Groundwater treatment system – recovered groundwater is treated with equipment on the service station property. The integrated treatment system was brought online February 5, 2007.

Groundwater treatment equipment third quarter 2023 performance:

- Runtime 70% average
- 100% of groundwater was treated onsite and discharged to surface water outfalls
- Average Treatment Efficiency = 100% (based on influent and effluent lab analysis)

Cumulative Groundwater Recovery Data – Groundwater recovery has been ongoing since February 17, 2006 as detailed in previous submittals. Based on data collected in the third quarter 2023:

- Approximately 151.57 million gallons of groundwater have been recovered
- Approximately 8.5 million gallons of groundwater transported offsite for disposal
- Approximately 143.07 million gallons of groundwater treated and discharged to surface water in accordance with general discharge permit number MDG919826

Daily groundwater discharge rates over the last year are presented in **Charts 1** and **2**. Groundwater discharge rate data for the third quarter 2023 are summarized in **Table 7**.

<sup>6</sup> MDE, January 25, 2018, *State Water Appropriation Permit No. BA2006G003(05)*, Revision 5. Former Exxon R/S No. 2-8077, 14258 Jarrettsville Pike, Phoenix, Baltimore County, Maryland, Case Number 2006-0303-BA2.

<sup>7</sup> MDE, January 25, 2018, *State Water Appropriation Permit No. BA2006G103(03)*, Revision 3. Former Exxon R/S No. 2-8077, 14258 Jarrettsville Pike, Phoenix, Baltimore County, Maryland, Case Number 2006-0303-BA2.

The system was offline for approximately 421 hours of unplanned downtime in early July due to a blockage in influent piping. The system was repaired and restarted on July 18, 2023, as reported to the MDE via email on July 13, 2023. An additional period of downtime occurred on July 29, 2023 for 85 hours, relating to an electrical wiring short in the compressor. The air compressor was repaired and restarted on August 1, 2023, as reported to the MDE via email on August 3, 2023.

**Notes:**

Discharge flow rates are reviewed and adjusted during the quarter to the SW and NE influent recovery rates for proportionality.

<sup>1</sup>7/17/2023 - Blockage observed in influent piping preventing flow of water into the system. Re-routed influent water around blocked piping and manually pumped water stored in system tanks and piping through system to discharge.

<sup>2</sup>8/31/2023 - All incoming water discharged to Northeast outfall through the end of the quarter.

gal = gallons

gpm = gallons per minute

gpd = gallons per day

## THIRD QUARTER 2023 REMEDIATION SYSTEM TREATMENT EFFICIENCY: GROUNDWATER

**Inactive Exxon Facility #28077**  
**14258 Jarrettsville Pike**  
**Phoenix, Maryland**

Notes:

\* Treatment Efficiency is only calculated when there is a reported influent concentration; and for calculation purposes, when the analytical effluent concentration is non-detect, it is assumed "zero" concentration was detected for the sample.
