

## Maryland Statewide Summary

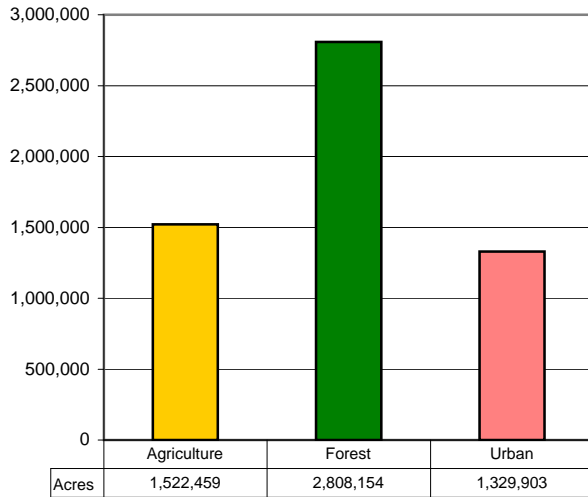

The charts in this handout summarize the EPA Chesapeake Bay Program Phase 5.3.2 land use. The acres presented are 2009 post-BMP implementation land use. BMPs that change land use have an effect on the acres presented. Such BMPs include tree planting, forest/grass buffers, forest conservation, nutrient management planning, and multiple tillage BMPs. The 2010 post-BMP land use acres are expected from EPA by late June of 2011 and at that time these charts will be updated accordingly. The current information is being provided in response to general interest by the Phase II WIP Local Teams. The following footnotes are important.

1. Urban source sector acres determined via a combination of the following data sources: U.S. Census Bureau urbanized area GIS data - 2009 update; CBP P5.3.2 2006 land cover "core urban areas"; MDE industrial stormwater and individual discharge GIS permit data; MDE mining permit GIS data; MDE construction data; MDP Propertyview GIS data; State delineated public land GIS data; SHA impervious cover; and MDE estimate of SHA right-of-way.
2. Federal lands were delineated by the EPA and are included in the CBP P5.3.2 watershed model segmentation. Maryland's general Phase II state and federal MS4 permit is only applicable within Phase I and II MS4 counties. Thus, all federal urban area within these counties is considered to be regulated under the NPDES program.
3. For detailed description of the land use categories please refer to Section 4 of the EPA Chesapeake Bay Phase 5.3 Model Documentation ([http://www.chesapeakebay.net/model\\_phase5.aspx](http://www.chesapeakebay.net/model_phase5.aspx)).

### Urban Land

### Agricultural Land

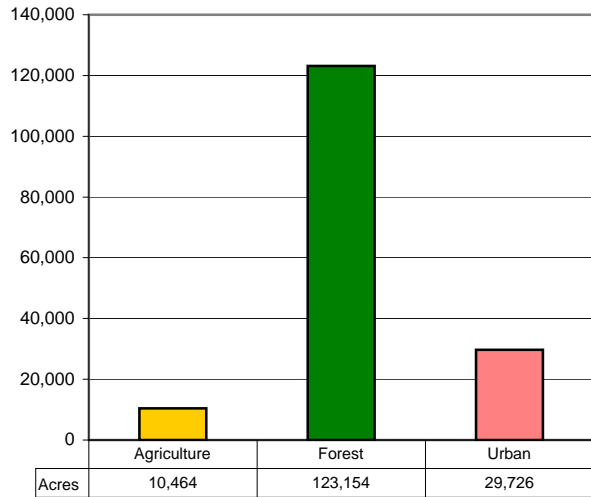

### Forest Land

## Maryland Statewide Summary

The charts in this handout summarize the EPA Chesapeake Bay Program Phase 5.3.2 land use. The acres presented are 2009 post-BMP implementation land use. BMPs that change land use have an effect on the acres presented. Such BMPs include tree planting, forest/grass buffers, forest conservation, nutrient management planning, and multiple tillage BMPs. The 2010 post-BMP land use acres are expected from EPA by late June of 2011 and at that time these charts will be updated accordingly. The current information is being provided in response to general interest by the Phase II WIP Local Teams. The following footnotes are important.

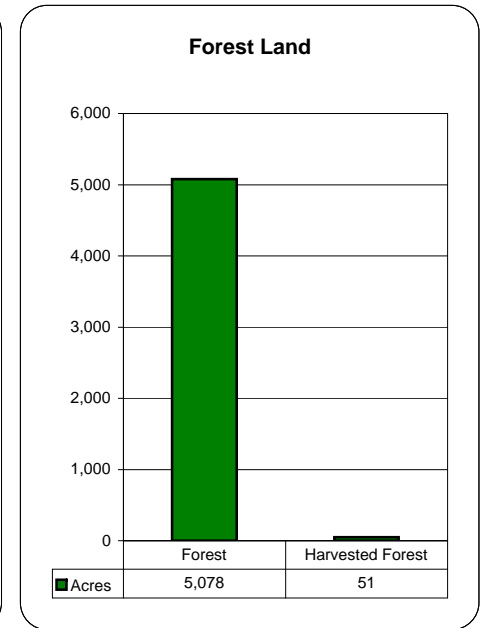

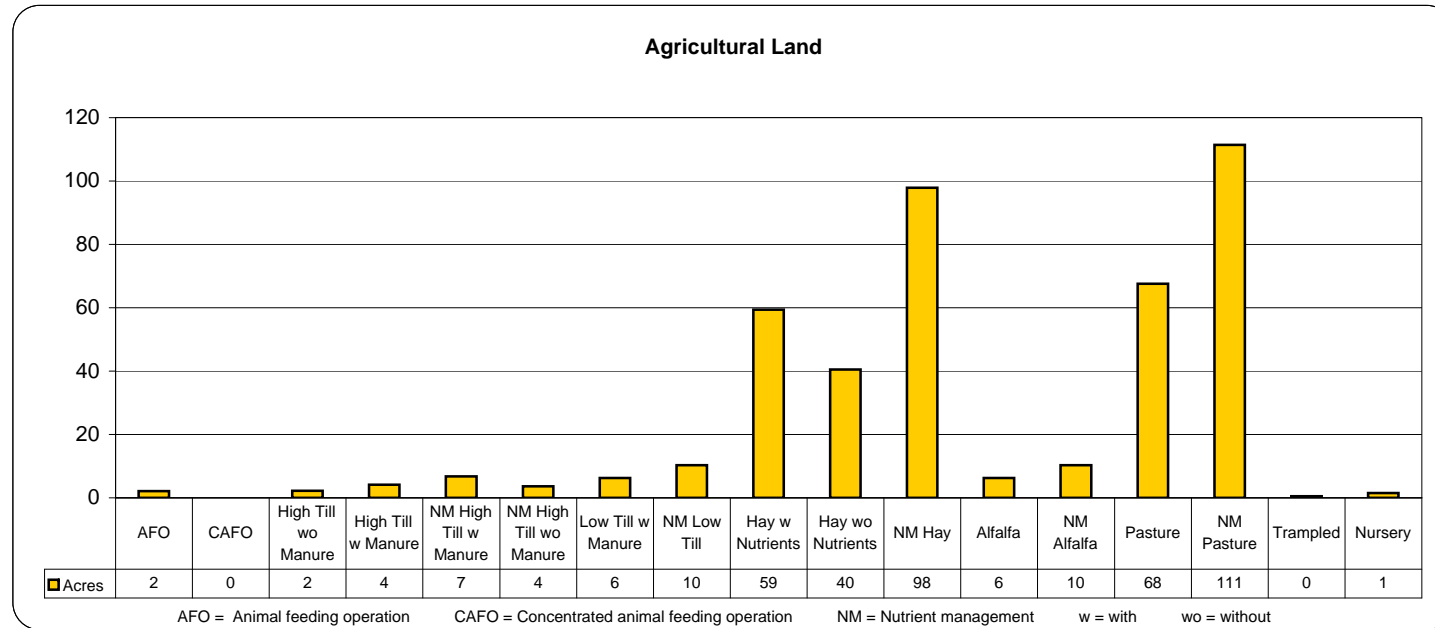

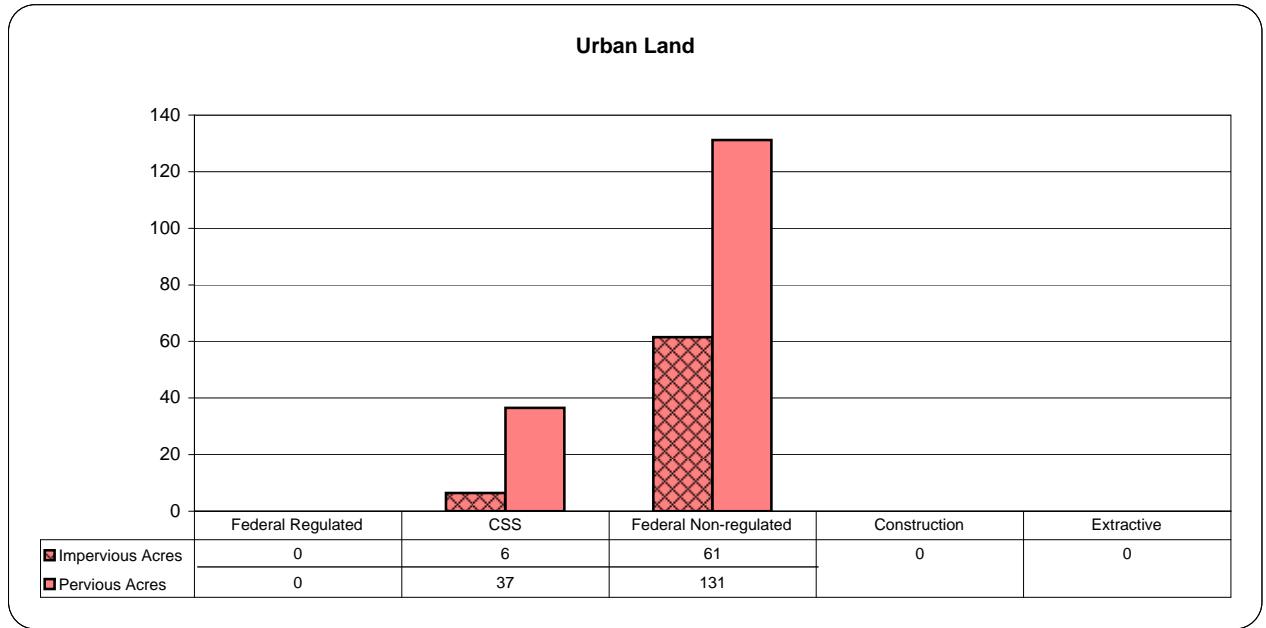

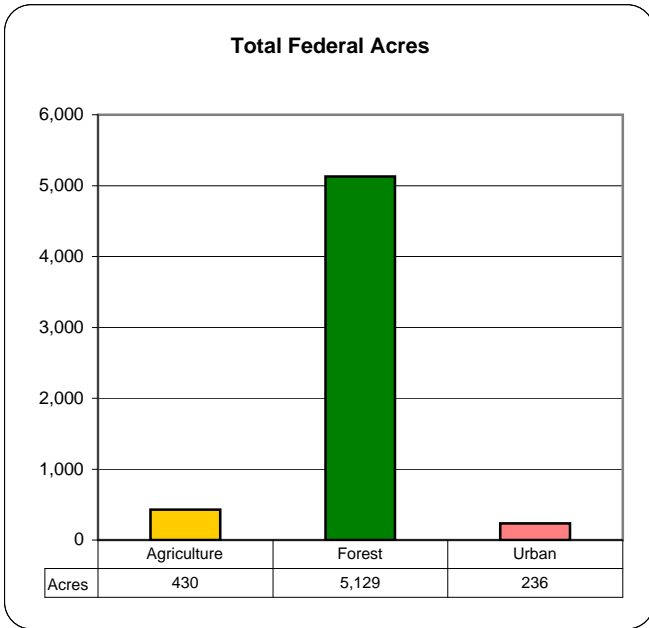

1. Urban source sector acres determined via a combination of the following data sources: U.S. Census Bureau urbanized area GIS data - 2009 update; CBP P5.3.2 2006 land cover "core urban areas"; MDE industrial stormwater and individual discharge GIS permit data; MDE mining permit GIS data; MDE construction data; MDP Propertyview GIS data; State delineated public land GIS data; SHA impervious cover; and MDE estimate of SHA right-of-way.
2. Federal lands were delineated by the EPA and are included in the CBP P5.3.2 watershed model segmentation. Maryland's general Phase II state and federal MS4 permit is only applicable within Phase I and II MS4 counties. Thus, all federal urban area within these counties is considered to be regulated under the NPDES program.
3. For detailed description of the land use categories please refer to Section 4 of the EPA Chesapeake Bay Phase 5.3 Model Documentation ([http://www.chesapeakebay.net/model\\_phase5.aspx](http://www.chesapeakebay.net/model_phase5.aspx)).
